Local & General

M. P. Diemert was a Calgary visitor this week.

I. Granlin visited Lethbridge Friday of last week.

Mrs. Otto Mueller was a Barons visitor recently.

Mr. Bouzvan left for Stavelly this week.

TO RENT—COMFORTABLE house, near school, Rent \$7, Phone 44

Mr. and Mrs. A. M. Watt and family of Brant were week end visitors in town.

Born—To Mr. and Mrs. Hartung, on Tuesday, September 6, a daughter.

Mr. Jos Kost of Grimshaw, Peace River is visiting his sister Mrs. Louis Path.

Mr. Geo. Duquesne left Wednesday for Vancouver where he expects to improve in health.

Miss Mary Bowman and Mr. Jim Bowman visited Lethbridge recently.

Miss Rheta Campbell has accepted a position teaching in a rural school out of Stavelly and left for that point Sunday.

Mr. and Mrs. Campbell, Mrs. Anderson and Miss Rheta Campbell spent Sunday at Willow Creek.

Mr. J. Deporter, formerly of the Canadian Bank of Commerce staff here, was a visitor in town Wednesday.

If the weather continues dry for the next ten days practically all the combining and threshing in the district will be done.

Why not join Miss Gramma's special beginners class and receive private piano instruction at fifty cents a lesson?

The first trees to show fall colors are the northwest poplars. Apparently the greater the foliage the shorter time it will last.

Mrs. Alex Gortz entertained at tea during the week when her guests included Miss Edna Stoddart and Miss Rheta Campbell.

Mrs. P. Dawson entertained recently in honor of Mr. Dawson's mother, Mrs. Dawson left on Saturday for her home in Calgary.

Miss K. Cowell received word during the week that she had been transferred to the staff of the Canadian Bank of Commerce at Lethbridge and leaves shortly for that point.

Arrangements have been completed for Calgary to be included in the Western Canada tour of the American and National Baseball League stars this fall. The teams will play in Calgary on Wednesday, Oct. 19.

The Flying Hutchinsons have been rescued by a British steamer. Their plane was wrecked and they had a narrow escape. Their experience should do much to make further foolish ventures of the kind unpopular—Calgary Herald.

A terrific windstorm, accompanied by hail and rain passed over the district Sunday, delaying threshing and combining until Tuesday noon. Severe damage from the wind and hail in several instances has been reported, some crops being damaged to the extent of 60%. Grain in stacks was severely battered by the hail, resulting in a loss.

Women's Institute

The regular meeting of the Women's Institute was held at the home of Mrs. McLean on Tuesday afternoon 13th inst. The president, Mrs. R. I. Baker occupied the chair. Twenty members and guests enjoyed an interesting and instructive address by Mrs. J. N. Baulieron Legislation. "Alberta Women," said Mrs. Baulieron are particularly favored by being the first to get the most legal rights; the first to call a woman to the council, the first to accept a judge's seat, and the first to receive Alderman's honors. The speaker also touched on the laws governing naturalization, the importance of wills, taxation, and federal legislation, during 1932. Marjorie McCollough's delightful piano solo and Current Events, reviewed by Mrs. Bastin were also features of the programme.

It was decided to hold a Bridge party at the home of Mrs. Alexander on Friday, Oct. 14th, and the Halloween dance on Oct. 28. Mrs. R. I. Baker was appointed delegate to the Constituency Conference being held in Brant on Sept. 27th. At the conclusion of the meeting Mrs. McLean served tea, the assisting hostesses being Mrs. Orr and Mrs. Bastin.

U. S. Alexander recently tendered his resignation as secretary of the Municipal District of Harbony and it is understood that steps are under way to fill the vacancy. Mr. Alexander has been secretary for the municipality for the past four years.

Word was received in town Sunday of the death of Mrs. Marie Oum of Oshkosh, Wisconsin, widow of the late Dr. S. M. Oum. Mrs. Oum was a sister of Mr. Howard and Frank Smith. Dr. and Mrs. Oum at one time owned property in this district and were well known to many here. Sympathy is extended to the relatives here.

Mrs. Philpott is the guest of Mrs. Y. Matlock this week.

NOTES AND COMMENT.

A Recruit for Ballyhoo

Publicity's value has just had a fresh endorsement from the firm of Sun, Moon & Stars, Inc. Even before attention was called to Photon's exciting ride in his father's sun chariot, some form of publicity has been in vogue. The heliographys carved up on a stone or the bark of a tree were the crude beginnings of the high-powered methods of the present era.

When Sun and Moon signed articles to put on a spectacle on Aug. 31, 1932, there were but a few astronomers to take any great amount of interest in the event. But then modern publicity methods were brought into action. With a resounding fanfare it was announced that a total eclipse of the sun would be presented for the entertainment and study of a large section of the United States and Canada on August 31. It was to be a matinee performance. Unfortunately conditions were such that an evening exhibit of a solar eclipse would not be feasible.

In newspapers, magazines and miscellaneous publications all over the world articles by astronomers, near astronomers and persons whose fathers had talked with men who had seen an eclipse told the now gaping readers the details of the great show. These two important characters in the solar system were to meet when the curtain rose on their two-hour performance. The various transitions were painted in glowing colors, and scenic effects were not overlooked. A view of the sun with Bally's beads around its back, a corona upon its brow and a moonstone on its chest was advertised as the grand finale of this seldom-presented spectacle.

And it was again show. It was worth all the price of admission charged. If the publicity ligit had been paid for it would have cost millions. It provided a striking example of mass education by modern methods. And it again stresses that old adage that "the fellow who advertises gets the business."

Experiments are being made at Amsterdam in the mixing of mechanically pulverized rubber and asphalt for paving. No doubt the average tourist who has checked native-imparted distance information against his speedometer will wonder what effect the new blending of materials is to have on the already elastic highways.

Hawaiian authorities, who have nearly fifty tons of tree seeds in the last ten years, find one airplane can efficiently sow as large an area in one hour as a man on the ground could in ten years. Reforestation necessarily is a slow process, but now it can at least get off with a flying start.

Recently the duke of Marlborough "paid" King George the annual rent for his estate of Blenheim. As the rent—one small silk flag—has been unchanged since 1704, he did not ask for a reduction.

Although the gold in the oceans is said to be worth \$28,000,000,000,000,000 it would cost much more than that to recover it. Now it would seem that all that is gold does not glitter.

Vacations, taken properly, may be without salary, but still with pay.

Youthful Strength

Dr. Magnus Hirschfeld, the world-known authority on Sexology and Director of the Institute for Sexual Science of Berlin, Germany, created.

TITUS-PEARLS

to help the millions of men and women who have lost or are losing their vital physical power. In his 33 years of practice and research, however, he realized that the weakening of man's glands was also responsible for other troubles: High blood pressure, hardening of the arteries, physical exhaustion after work or exercise, dizziness, depression, neurasthenia, etc.

All these troubles can be removed with Titus-Pearls. Numerous cases were treated by Dr. Hirschfeld in his Berlin Institute. L. S. (State Official; 60 years old, married) complained of physical exhaustion, dizziness and tremors. Was easily tired. Mental powers dull and slow moving. Physical powers had been incomplete for previous 5 years. Blood pressure too high. Given 2 Titus-Pearls 3 times a day. 2 weeks later the medical report on this man was:—General health better, more vigor; dizziness much less and returning of power. Treatment continued and 2 weeks later L. S. reported again, this time to say that all weariness and exhaustion had gone; he felt fresh and buoyant. His blood pressure had fallen, and at 60 years of age he had regained the physical power and virility that he had known in the prime of his life.

Start regaining your youthfulness now! Today! In 2 weeks time you will be aware of the new, virile force within you. Send \$5.00 (cash registered or money-order) for 2 weeks treatment. Write for booklet. C. O. D. orders accepted.

To avoid mistakes please fill out the following coupon:

Don't Pass the Pool Elevator

The best method of advancing the interests of Alberta grain growers is to see that every possible bushel of grain goes to an Alberta Pool elevator.

Alberta Pool Elevators

Operating for the benefit of Alberta grain growers.

National Advisory Council To Direct Co-ordination Of Agricultural Services In Canada

Domestic and provincial agricultural officials at Toronto concentrated on a study of the livestock industry to find ways of making it pay better dividends to the Canadian farmer.

The conference, called by Hon. Robert Weir, Federal Minister of Agriculture, also considered the establishment of a national advisory council to direct co-ordination of agricultural services throughout the Dominion. Such a council would co-operate with the national research council already in existence, explained Mr. Weir.

Samuel E. Todd, secretary of the Industrial Council of the Canadian Meat Packers' Association, told the 100 delegates that henceforth the packing houses of this country will permit government inspectors to inspect hog carcasses "on the rail" in the districts. This practice will help Canada meet Danish competition in the United Kingdom market, it is expected. For some time Danish bacon packers have had the advantage of government inspection in the killing plant, while inspection in Canada has been made "on the hoof."

The job of agricultural officials and farmers, it was agreed, is to take full advantage of the 280,000,000 pounds bacon quota offered Canada by the United Kingdom, a quota much greater than the total annual production of Canada for 1931.

The conference also tackled the problem of marketing beef. Dean A. M. Shaw of the University of Saskatchewan, called attention to the market for finished beef in the United Kingdom, and pointed out that wheat is an ideal finishing feed for cattle.

There is just as much opportunity for the sale of commodities of high quality cattle in certain markets as there is for the highly finished animal preferred in the big London market," he added.

Dean Shaw declared continuity of supply was an even more important requirement than quality in the United Kingdom, and that Canadian dealers supplying the trade there could not afford to discontinue or lose their customers.

Irish Free State competition is at a standstill for the moment, said Dean Shaw, but he felt sure Irish cattle would come to the fore again sooner or later.

The conference set up a special committee to consider best marketing, with the following members: Dean Shaw, Prof. J. C. Streeby, of the Ontario Agricultural College, Guelph; J. H. Bryan, Deputy Minister of Agriculture for Manitoba; R. S. Hamer and P. E. Light, of the Dominion Livestock Branch, Ottawa. Hon. Robert Weir suggested that provincial agriculturalists form advisory committees of their own to discuss their own problems from an administrative standpoint and from the standpoint of extension. "They will also," he explained, "bring up in these committees questions of further research into the difficulties and problems affecting the progress of agriculture in that province."

In many cases, however, said Mr. Weir, other provinces might have identical the same problems. "Are they going to endeavor to solve them themselves or co-operate with other provincial and federal interests?" he asked. "There must be some one to whom they submit it to see if the problem is really provincial or national, also to ascertain what information in respect to it is already available. That is my idea of what this national advisory council should do."

Alaska's king salmon run this year is reported excellent.

A salmon has been timed to swim 10 yards in one second.

Doctors' Opinion On Alcohol As Medicine

Beneficial In Some Diseases But Injurious In Others

Alcohol has been found beneficial in treating some diseases but injurious in others, by Dr. Harold E. Hinrich and Dr. Louis H. Nahum, of the Yale medical school.

Results of their study showing that alcohol increases the acidity of the blood to points formerly believed incompatible with life were made public at the international congress of the Federation of Societies for Experimental Biology held at New Haven, Conn.

In diseases such as tetanus, where the blood contains an abnormal amount of alkaline substances, the scientists determined the acidity of alcohol acts as a neutralizing agent.

Small doses of alcohol were found to be helpful in treating diabetes, where they counteract the effects of partially oxidized fatty acids.

On the other hand, the research showed administration of alcohol to patients suffering from fatty recovery by increasing acidity.

The "hangover" following intoxication, they concluded is caused by the accumulation and persistence of lactic acid in the blood. This condition, which does not disappear as quickly as the alcohol, also is found in the case of strenuous physical exertion and is believed responsible for a feeling of fatigue after hard work.

College For Fishermen

To Receive Diploma Angler Must Have Regard For The Truth

A "college" to equip fishermen with something more than luck has been established in Florida by Dr. C. H. Bryan, retired Chicago physician.

The physician says he organized a course of instruction because he was "pained at the inaptitude of fishermen." Dr. Bryan and fellow-fishermen from the faculty of the "college" will show newcomers just how it's done, not as a profit-making proposition, they explain, but just as a matter of personal satisfaction.

The fishermen's "college" issues a "diploma," conferring a degree of "bachelor of fishing," which reads: "This certifies that (the holder) has shown himself to be a brave man when tackling a big fish. He has had his thumbs burned on his reel, his red broken and his bait torn from his line without showing any sign of fear. He also speaks the truth when telling of the size, strength and ferocity of a fish."

Advice To Agriculturists

Says Man On The Land Falls To Grasp Best Methods Of Farming

Leading speakers before the national agricultural conference in Toronto, held last week, agreed that agricultural services should render more direct assistance to the Canadian farmer.

In a dozen committees efforts were being made to whip into shape definite recommendations to the Federal and provincial governments for co-ordination of governmental and other services. The indications were that every proposal would be debated by the conference as a whole.

Farmers are not doing "half as well as they know how," the conference was told by Dr. G. I. Christie, president of the Ontario Agricultural College. They fail to grasp the idea that there is a best method of farming, he said, but they need help so desperately that agricultural officials must find more effective means of giving them expert assistance.

May Help Salmon Trade

Machine Invented To Skin The Fish Before Canning

Now even the salmon are getting skinned! An invention by W. F. Schuchman and his brother James, of Ketchikan, Alaska, skins salmon preparatory to canning them. Little information on the machine has been given out by the brothers pending patents. Some 20,000 cans of salmon have been used so far this season with the new machine, and the inventive brothers see great things in their brainchild.

Mistress—"Mary, while I was away you wore my blue dress. I don't like it."

Maid—"Oh, madam! And I just love it!"

W. N. U. 1959

(By Ruth Rogers)

BLOOMER DRESS EVER POPULAR WITH TINY MAIDS FOR PLAYTIME

She can't have too many! Isn't this a cute dress? The French yoke provides excellent theme for contrast. The skirt falling from the yoke, makes it swing about so prettily in motion, it can be made with tiny muffed sleeves as in miniature view.

So many materials would be suitable for to fashion it. It takes the minimum amount. The one sketched is French blue with white dots in battle. The yoke is plain blue with plain white ruffing. Style No. 854 is designed for sizes 2, 4 and 6 years.

Size 4 requires 2 1/2 yards 35-inch with 1/2 yard 35-inch contrasting. Pique, cotton broadcloth, prints, linen, rayon novelties and wool crepe are sturdy and smart suggestions.

Price of pattern 25 cents in stamps or coin (coin is preferred). Wrap coin carefully.

Holstein Capture Honors

Entries From C.P.R. Farm At Strathmore Have Winning Streak

Making its annual invasion of the Pacific Coast to compete against British Columbia's best, the famous Holstein herd from the Canadian Pacific Railway's supply farm at Strathmore, Alberta, captured honors for senior champion bull, reserve senior and junior champion bull, senior and junior champion bull, first prizes for senior calf, yearling female, senior yearling bull and a string of lesser ribbons at the Canada Pacific Exhibition in Vancouver.

Strathmore McKinley Emperor, junior champion was barely noted out of grand champion honors by Tami Burke of Crystal Spring, entry of Paul and Sons, Chilliwack, but Strathmore Colony Koba Fairchild and Strathmore McKinley Senator won both reserve championships for senior and junior bulls for the C.P.R. supply farm.

Strathmore Designer took first for bulls over three and under four years and the railway farm scored again with Strathmore McKinley Senator, an all-white, which was the judge's first choice among senior yearling bulls.

Senior calf honors also went to the Strathmore herd which carried off two more first prizes for four-year-old cows in milk and senior yearling female. McKinley Johanna, from Strathmore, was judged best senior calf, with another C.P.R. entry, Strathmore Aggie Rose, placing second.

The Horse Comes Back Draught Animals Being Used More Extensively Than For Some Years Past

Horses are being used more extensively in harvesting in western Canada this year than for some years past. Low prices have forced farmers to cut down expenses in every possible way and the new fangled motor machinery has been replaced by the horses of earlier days.

Gasoline costs money and even farmers who have power machinery find it more expensive to get horses in operation than to buy gasoline and use their motor equipment.

The relative merits of horse and motor power in farm operations have never been settled. Many successful farmers have steadily refused to install power harvesting equipment and they find continuation of their views in the tendency to go back to the horse under pressure of hard times.

Whether the present situation indicates a permanent trend is another question, however. Little new machinery has been purchased this year but those farmers who have up-to-date power equipment and are not too sharply pressed for ready money prefer to continue using it and are doing so.

Probably Locust Beasts

That the locusts eaten by John the Baptist were probably not locusts but the fruit of the carob tree, the dried fruit of which are the locust beans now sold as food for cattle, is the declaration of a European scientist.

The carob tree is sometimes called the honey tree because of the sweet pulp in its fresh pods.

Holland bought all the salt shipped in a recent month from Russia.

Damp and Tough Grain May Now Be Dried Without Damage To Its Milling and Baking Qualities

Canada need not again suffer the losses sustained when the percentage of damp and tough grain in the crops of 1929 to 1930 reached unprecedented heights ranging from 28.8 to 50.8 and the cash deductions to Canadian farmers totaled millions of dollars.

Artificial drying of wheat was one of the first problems to which the National Research Council's Associate Committee on Grain Research set its hand. In 1929 a report was issued which set out the conditions of correct artificial drying that practically all causes of complaint against Canadian grain on the score of damage incurred during drying were removed.

There has now been issued a comprehensive document of 104 printed pages, which confirms the specifications laid down in the first report, shows up a number of additional points and demonstrates what conditions contribute to the efficiency of commercial driers. Damp and tough grain may now be dried without damage to its milling and baking quality.

Included in the present report are discussions of a small-scale experiment designed for the study of the limits of safety in drying with regard to air flows, air temperatures and extent of drying in both continuous and batch drying of wheat.

Other aspects of the problem discussed are factors in continuous drying, drying in cold weather, drying in two stages, drying with humidified air, excessive drying, inevitable loss in drying, atmospheric humidity in relation to grain drying, weight per bushel in relation to drying and the nature of injury caused by heat drying.

In three important appendices are discussions of observations made in commercial driers in Vancouver with suggestions for improved operation, a review of the literature on the bin drying of wheat (drying by natural ventilation, drying by forced, unheated air; drying by forced heated air and "steaming") and the influence of heat treatment on the baking behavior of flour is determined by different baking formulas.

Copies of the appendix containing the review of the literature on the bin drying of wheat have been made available separately.

In making the investigations involved the committee developed a system of dividing all samples of grain tested into three or four parts and checking the milling and baking results independently in three or four laboratories, using methods which were carefully standardized by frequent consultation and comparison. It was considered important not to draw any far-reaching conclusions which might mean millions of dollars one way or the other to the grain growers and the grain trade, without verifying results in more than one laboratory. The system inaugurated in this, the first large co-operative undertaking of the Associate Committee on Grain Research, has been followed in all later work, and has the advantage of inspiring confidence in published conclusions of the Committee.

The authors of the report now published are:

labeled are E. Stansfield, Chief Chemical Engineer of the Research Council of Alberta, and Dr. W. H. Cook, Junior Research Scientist, National Research Laboratories.

While it is believed that the two reports published cover most of the practical points which are likely to arise from the viewpoint of the operators of commercial driers, there remain some points of scientific interest which are being made the subject of fundamental studies. For example it will be of interest to know more about the nature of the changes occurring in wheat exposed to heat, as in the drying process, and what it is that under certain conditions leads to impairment of baking quality.

These studies will be published in due course in the form of scientific papers and may easily help in unexpected ways to handle the practical problem of wheat drying to still better advantage. Dr. Robert Newton, Director of the Division of Entomology and Agriculture, National Research Laboratories, comments: "It is impossible to assess in advance the value of fundamental studies of this kind. We know that the more completely we understand any process, the more likely are we to be able to guide it to suit our own ends most effectively."

Nature Photography

In British Columbia

Hunters Go After Big Game Loaded With a Camera

During mid-summer the organizing of hunting parties is carried on at many points in the Rockies, and by the first of September the trek of sportsmen to the best game haunts in places. Splendid trophies may be secured of mountain sheep, goats, caribou, moose, bear and deer, but the modern hunter is becoming more and more of a sportsman, rather than a hunter, and is turning with a load of heads, he contents himself with far more convincing records of his hunting prowess in the form of films. The camera hunter has the double satisfaction in knowing that the subject might have fallen as easy victim to his modern, high-powered rifle, but still lives, free to enjoy life in his chosen haunts.

Trapping Regulations

Necessary To Keep Close Check On Trapping In Northern Saskatchewan

Full regulation of trapping in Saskatchewan's hinterland is proposed by the Saskatchewan Government, according to Hon. A. C. Stewart, Minister of Highways, who returned from a trip to northern points.

For supplies in the north states Mr. Stewart are being rapidly depleted and some form of regulation is vital. The proposal is to institute a system of licensed trappers. At present trappers, who pay only a trappers' license, are under the spur of keen competition, "clear-cutting" the game and depriving some of the best fur country in the province.

Aspen Poplar Found In All Provinces

Aspen poplar is one of the most widely distributed trees in Canada, being found in every province of the Dominion. Its northern limit extends almost to the Arctic Ocean, at the Mackenzie delta. From the wood of the aspen are made excelsior, boxes, and barrels for foodstuffs, and certain kinds of wood-pulp. Lumber made from it is difficult to season and very perishable. In the Prairie Provinces it is an important source of fuel—Forest Service, Department of the Interior.

Old automobile tires are being burned to kill destructive insects in market gardens in Cavillon, France.

We've found a sure cure for insomnia. Instead of counting sheep, we just imagine that it's time to get up.

Outstanding Value Always

TEA

"Fresh from the Gardens"

Taxes--Who Is Responsible For Them?

It is an old saying, and true, that there are at least two things which no person in the world can escape--death and taxes. So far as the former is concerned it is inevitable; it may be postponed by rational living, by observance of the laws of nature and hygiene, by the exercise of "safety" principles, but, in the end, it cannot be avoided.

Taxes, too, are inevitable if orderly government, a properly organized community life, and essential public services are to be maintained, but, and this is the important thing, the taxpayers have it within their own power to determine the size and extent of the tax burden they shall carry.

Begin a discussion of the subject of taxation and the chances are that nine out of every ten persons, yes, ninety-nine out of every one hundred, will at once lay the blame for their unduly heavy burden upon Governments, either Federal, Provincial, Municipal, or all three combined. Governments, of course, are partly responsible, but the taxpayers themselves are even more responsible, and it is high time Mr. and Mrs. Taxpayer realized this fact of their responsibility.

In the first place, the taxpayers are responsible for creating the Governments. It was their votes which placed the Governments in power, by virtue of the vote of the taxpayers that Governments continue in office to apply their policies, impose taxes, and spend the proceeds of those taxes, or, contra, are ejected from office. The taxpayers cannot escape this primary responsibility.

Secondly, Governments are constituted of groups of human beings, with all the failings of human beings. Placed in office they naturally desire to stay there, while opposing groups out of office just as naturally desire to get in. All these groups, therefore, angle for the support of a majority of the taxpayers, who are the first arbiters. If one group presents an attractive programme of public works, involving large expenditures, much employment, and consequent free spending of public monies, contrasted with a more conservative and economical programme, the majority of the taxpayers will endorse the former and reject the latter, then, again, it is the taxpayers who are responsible for the ensuing large borrowings on public credit, the creation of a large public debt, and the resultant heavy taxes to pay the charges on that public debt. The group in office may be responsible for proposing an unwise policy, but the taxpayers themselves set the seal of their approval to that policy and issue instructions that effect be given to it.

In the third place, there has never been a government entrusted with the duties of administering the business of all the people which has not been confronted with demands from the people that it do this or that, provide this service or construct that public work, extend financial support to this organization or that project. The cabinet of ministers, or municipal council as the case may be, may feel that the action urged upon them is unwise, but if the clamor is loud enough, and the demands of the taxpayers themselves urgent enough, they will, as representatives of the taxpayers and depending upon their support, yield to such demands. The result is more and heavier taxes. Governments must accept some responsibility for yielding to such demands when their judgment ordered otherwise--there are times when it is the duty of Government to resolutely resist public clamor and refuse their demands, even when it means the defeat of the Government and the placing in office of another group which will carry out those demands--but the major responsibility rests upon the taxpayers, the voters.

Then these self-same taxpayers make bitter complaint because their taxes are heavy. "They discover they cannot pay the taxes imposed upon them by reason of the very expenditures and borrowings they themselves initiated their Governments should make. When it is too late, because the obligations have been incurred and must be met, they demand that their taxes be reduced, or wiped out altogether. And when a responsible Government, entrusted with the preservation of the credit of the Dominion, a Province or a Municipality, declines to do this, because it cannot be done honestly, and if done dishonestly would result to the further disadvantage of the taxpayers, then many of the taxpayers make the further mistake of listening to, and being guided by, other groups which promise to do what is being demanded. In this difficulty Mr. and Mrs. Taxpayer is willing to jump out of the frying pan into the fire.

When the taxpayers make a mistake, either as individuals or collectively as a community, they must pay the penalty. If a child plays with a match, the fire it will suffer pain. There is no escape; it cannot undo its rash action. So, too, the taxpayers cannot tear up and repudiate what they have done, or their Governments, acting for them and all too frequently upon their own organs, and with the approval of the majority, have done for them. They must abide by the consequences.

What they can do, and should do, is set to work to remedy the mistakes made in the best way they can, and sternly resolve not to commit the same mistake again. A little more thought and judgment before plunging into expenditures and debt is the surest method to reduce taxes and keep them down.

A Silent Cannon

Innovation In Artillery Is Tried Out In Italy

A "silent cannon" which emits no smoke or flame may become an innovation in the Italian artillery. The cannon was perfected by two Neapolitan engineers, Guglielmo De Lase and Ferruccio Ferraris, former officers in the artillery.

Official trials of the gun were in the Ansaldo shipyards at Pissuati, where a government vessel was being present. Others who witnessed the trial said the gun was entirely successful.

Pope Pius X has decided to install electric heating in the Vatican palaces.

Pains In Stomach and Bowels So Bad Would Have To Sit Down

Mrs. C. Landry, Montreal, N.B., writes--"I was last night consumed by Dr. Fowler's Extract of Wild Strawberry for cramps or pains, which was soon relieved."

"Last Summer I had such awful pains in my stomach, and lower part of my bowels, at times, I would have to sit down. I took 'Dr. Fowler's' and was soon relieved."

"When my children were small I always kept a bottle of 'Dr. Fowler's' and it helped them wonderfully whenever any of them had bowel complaints."

When We Slumber

Sleep Seems To Be Controlled By Amount Of Iodine In The Blood

A new idea of what sleep really is--discovery, that it seemed to be controlled by the amount of iodine in the blood--was reported to the British Association for the Advancement of Science.

Thyroxin, the iodine-containing secretion of the thyroid gland, apparently is the sleep-controlling substance, said Dr. G. S. Carter. It does its work in reverse fashion for artificial sleep-producing drugs, however. Sleep seems to come when the supply of thyroxin in the blood is decreased, not increased.

The winter-long "sleep" or hibernation that is habitual for many animals also seems to be controlled by thyroxin. Dr. Carter said his experiments showed.

He tried thyroxin on frogs, which have a different temperature and pulse rate in winter while hibernating than in summer when they are active. When thyroxin was injected into the heart of the hibernating frog, its temperature and pulse increased to the summer level. Thyroxin was the gland secretion that had this effect.

Far Progress Of Silk Industry

So Far Economic Disturbance Does Not Seem To Have Affected This Business

The silk industry of Canada has so far evidently not been affected by any economic disturbance. In 1931 the value of production of this industry amounted to \$18,157,492, an increase of \$1,848,449 or 11 per cent. There has been an increase in the Canadian silk industry from 1917 to 1931 of over 666 per cent in production, of 1.5 per cent in capital invested, and in the number of employees 661 per cent.

The silk industry of Canada is divided into two distinct branches, real silk and artificial silk. The industry is located entirely in the provinces of Quebec and Ontario, thirteen in the former and five in the latter. The principal firms of production are broad silk or piece goods of real silk, valued at \$5,657,612 yards were made in 1931. Piece goods of artificial goods measured 4,073,444 yards; real silk mixtures measured 2,859,989 yards and 4,333,839 pounds of silk, artificial silk, yarns and threads and their mixtures were produced.

Soviet Food Industry

Results Of First Seven Months Of This Year Are Unsatisfactory

The work of the food industry in which Soviet Russia looks for its daily meals was called "unsatisfactory" by D. Levitin, member of the collegium of the commissariat of supply, in a report on the results for the first seven months of this year.

In spite of beginning production in several new modern equipping the plant, prices adding greatly to the productive capacity, he said, the industry during the first six months of the year exceeded the production of the period in 1931 by only 6.5 per cent.

This, he said, was "quite insignificant." The 1932 plan calls for an increase of 36 per cent. over the production for 1931.

He blamed the result on bad management, a poor supply of raw materials and carelessness in many enterprises in taking steps to preserve perishables.

Douglas' Egyptian Liniment is an excellent leg wash for stock. Also relieves bruises, sprains, and joint stiffness.

Rescuer Was Cautious

A resident of old Fort Erie was telling how he had rescued a man from drowning off Point Abino, says this fellow came out and heard him cry for help," he said, "I swam out to him and found him floating face downward. I turned him over to make sure it was the same man and then I towed him ashore."

Lighting Plays Queer Trick

Lightning played a queer trick upon the mechanism of a watch found upon the body of a man in England, who was struck by lightning and killed. When the victim was found the watch had stopped at 4:30 p.m. Some time afterwards the watch commenced to go again--but backwards.

Where English Draw Line

An enterprising investigator has just discovered that the postoffice department of England will let a "chump" or a "blockhead," but it is against the rules to call him a "fathead."

DOES OWN HOUSE-WORK AT 70

With the Help of Kruschen

"For nine years now I have used Kruschen Salts and could not do without them. I take a third of a teaspoon in a cup of water as hot as I can drink it. No sickness or headaches now. I am 70 years of age in April, just what I am taking Kruschen Salts am able to do all my household duties myself. I recommend Kruschen to all my neighbors. Before I began taking it I was never away from the doctor, but now I never need him. I used to have sick headaches and was not able to do anything. But now it is different--thanks to Kruschen Salts." (Mrs. J. G. Kruschen keeps the organs of the body working actively, cleanses all clogged impurities from the system and sends clear, vigorous blood coursing through the veins. And the result is that all the ailments, aches and miseries, No more headaches, tiredness, depression, "nerves," or constipation. Instead, a sensation of delightful freshness, high spirits, happy outlook--in short, sheer good health!

Garnet Wheat

Not Sufficient Evidence To Justify Separate Grading

If Garnet wheat had been separately graded since last year's growers would have had to take a cut in price, asserted Hon. Robert Weir in a statement to the National Agriculture Conference at Toronto.

Contrary to the opinion of the national research council said Mr. Weir, the Department of Agriculture he admitted had taken the stand there was not sufficient evidence to justify the separate grading of Garnet. The department did not accept the view Canadian wheat was less satisfactory to the United Kingdom millers after Garnet came to the picture.

Mr. Weir declared no person would be more eager to support the separate grading of Garnet wheat than he, if it were beneficial to wheat growers.

Don't Submit To Ashken. If you suffer without hope of breaking the chains which bind you do not put off another day the purchase of Dr. J. C. Kellogg's Remedy. A trial will drive you to the source of your trouble. The sure relief that comes will convince you more than anything that can be written. When help is so sure, why suffer! This matchless remedy is available at dealers everywhere.

All Empire Soldiers Now Commemorated

Even Those With No Known Grave Named In Memorials

When the British war memorials were unveiled recently at Thiepval and Arras, France, by the Prince of Wales and Marshal of the Royal Air Force, Lord Trenchard, respectively, every empire soldier--officer and man--who was lost in the world war and never found was commemorated by name.

The Thiepval monument is carved with 73,367 names of men "with no known graves," while that at Arras records 35,000 names.

A Household Medicine--They that are acquainted with the sterling properties of Dr. Thomas' Electric Oil for the treatment of many ailments would not be without it in the house. It is truly a household medicine and is effective in dealing with many ordinary complaints it is an inexpensive medicine. So, keep it at hand, as the call for it may come most unexpectedly.

Prominent In Politics

Although there is only one lawyer in Canada for every 1,600 people, there is one lawyer in the House of Commons for every four members of other callings. The ratio in the senate is slightly higher and in the provincial legislatures it is the same. These figures were worked out by Mr. Justice A. F. Welling of the Supreme Court of Alberta, and presented to the Canadian Bar Association in an address on "The Place of the Lawyer in the Public Life of the Country."

The Molly Maguires, famous in Irish history in 1843, were a secret association of tenants plotted to resist the collection of rents.

CONSTIPATION

W. N. U. 1939

Invention and Idleness

Warning Is Sounded In Connection With Mechanical Progress

Sir Alfred Ziegler, president of the British Association for the Advancement of Science, sounded a note of warning to mechanical progress as he opened the 101st annual meeting of the association at York, England.

"We must admit that there is a sinister side even to the peaceful activities of those who in good faith and with the best intentions make it their business to adapt the resources of nature to the use and convenience of man," Sir Alfred said.

Telling of the great progress of the "mechanical age," Sir Alfred declared "man was ethically unprepared for so great a bounty. The command of nature has been put into his hands before he knows how to command himself." He declared that man had the joy of craftsmanship because of the machinery of mass production.

"In many cases unemployment is thrust upon the worker, an unemployed man is more pathetic than any drudgery. And the world," continued the association president, "finds itself glutted with competitive commodities, prodigious quantities too great to be absorbed, though every nation strives to secure at least a home market by erecting tariff walls."

Sir Alfred could not make a remedy for the situation, but declared he refused to think that man is destined to atrophy and cease through cultivating a habit after all is said and done. Most God-like facilities, "the creative genius of the engineer."

The president spoke with enthusiasm of the benefits of electrical communication which, he said, had brought distant parts of the earth's population into close contact and sympathy with one another.

Decreasing Revenues

Quebec Reports Deficit For The First Time Since 1896

Decreasing revenues in Quebec were reflected in the annual financial statement of the province recently made public. A deficit of \$584,700 was reported, the first time since 1896 that Quebec has not wound up its financial year with a surplus.

The annual statement shows ordinary revenue was \$36,941,020.36 while expenditures amounted to \$37,525,728.57. The decrease in the revenue as compared with the previous year was \$4,589,600.20, compensated for partly by economies effected in various departments of \$5,012,824.23.

Persian Balm Is Irresistible. Fragrant as summer flowers. Cool as a mountain spring. Wonderful relief of all aches, stiffness and whitens the hands. Makes skin soft-textured and healthy. Used by women as a perfume base and as a perfume aid to lovely complexion. Also used by men as an effective hair restorative or shaving lotion. And for children, nothing soothes and protects their tender skin like the delicately cool Persian Balm.

Wanted To Be Friendly

But Attempted Embarrassing For Service Club Member

It happened at a service club luncheon. The speaker was being introduced at the door. And the usual attempts were being made to make him feel at home.

"Say, haven't I met you before some time? Maybe in a club. What's your line?" asked a club member.

"Well, maybe you have met me in business," said the visitor, somewhat bashfully. "I'm with a detective agency."

Then there was a general laugh, as the embarrassed member pushed his way through the crowd.

Royal Photographers

There is scarcely a member of the Royal Family who does not carry a camera on holidays. From the King and Queen downwards, the most illustrious in snapping, and not only in that, for they also like to develop their own films. The Duke of York is the champion photographer of the Royal people, and is the proud possessor of an album of delightful pictures depicting the Duchesses and the little Prince.

Mother--"Poor boy, how did you hurt your thumb?"

Son--"With a hammer, just a little while ago."

Mother--"But I didn't hear you cry?"

Son--"I thought you were out."

"Grandpa, will you give me a drum for my birthday like you gave Jack?"

"Why?"

"Cause dad gives him a quarter a week not to play it."

In 1864 the New Jersey legislature abolished slavery.

For Baby's Bath

More than that of any other member of the family, baby's tender, delicate skin needs the greatest care and attention. In Baby's Own Soap make it specially suitable for babies, and its clinging fragrance reminds one of the roses of France which help to inspire it.

"The best for you and Baby too"

Many Coins Are Lost

Nothing Surprising About Finds Made In Ancient Towns

People are often surprised when ancient towns are excavated, that so many coins should be found. Well, if in ten thousand years' time archaeologists get busy with their spades in Great Britain, they may be even more astonished. Pennies issued by the Mint during the past 70 years would cover an area the mile long by nearly half a mile in width. For the number 1,760,000,000. How many of these do you think have been lost? The answer is a staggering figure. Not less than 500,000,000. The lost pennies represent the best part of a shilling a head for every man, woman and child of British population.

Canada's Northern Game Reserves

Exclusive Hunting Grounds Set Aside For Indians and Eskimos

The government has set aside four large game preserves in the North West Territories as exclusive hunting grounds for the native Indians, Eskimos and the Inuit. The policy prevents exploitation of the fur resources of these areas and it is hoped also will tend to foster and increase the supply of game. The reserves will overflow to the adjacent districts where commercial hunting and trapping are allowed. A considerable portion of the reserves is in the Province of the four, is shown on the Hunter Bay-Coppermine River map sheet just published by the Topographical Survey Department of the Interior, Ottawa.

The site on which London's Mansion House stands, one of the most valuable in the world; it is valued at nearly £2,000,000.

NEW INVENTION DOES AWAY WITH COOKING ODORS

Even fish and cauliflower bow down to Canpar Cookery Parchment

BETTER, CHEAPER AND EASIER COOKING

Delicious as cauliflower, cabbage and carrots, the Canpar Parchment, they have imposed a heavy penalty on cooks who feasted on cooked food. The odor which they used to transfer the odor without enjoying the finished product. The same thing is true of fish and cauliflower.

Canpar Cookery Parchment, a very ingenious invention, does away with this noxious odor. While sealing in odors, it also retains flavor and food value. Canpar Cookery Parchment actually parallels the famous French method of steaming and cooking food and is the best in the world.

You buy Canpar in a large envelope of handy-size sheets which may be lined out and used over and over again because they won't absorb odors. When boiling vegetables you simply wet the Canpar and make a bag similar to a pudding bag. If you steam them, you line the steamer with Canpar, arrange food and seasoning, and fold back corners of the Canpar to prevent steam from dripping back. You can actually cook three vegetables at once in the same steamer, this way save fuel--and the flavors will firm.

Steamed, or boiled, fish comes out firm, solid and swimming in its own juice. No loss of the same succulent, this way save fuel--and the flavors will firm.

Like your roasting pan with Canpar, then the fish and juice can't burn. Meat is more succulent and there is no scorching. The Canpar is so easy to use that even the most inexperienced can use it. Many women use Canpar for a dishcloth--it is so silky and satisfactory, and so easy to wash.

You'll never be without Canpar once you start using it. It saves time and money, and the coupons and we'll give you a new and unique booklet entitled "Leftovers" containing one hundred recipes as a bonus for your trouble.

Enclosed find 25c for which please send me one full-size package of Canpar Cookery Parchment and 100 recipes for "Leftovers."

"DO I DREAD MY NEXT BIRTHDAY?" NO!" says Anita Stewart

Then, as Tormarin made no answer, she leaned forward and said intently: "Do you know the characteristic of the Vikings, Monsieur Tormarin? They never forget—neither—her foreign accent increasing, as usual, with emotion of any kind. The Corsicans always reply."

"Yes! And you have something to repay? Is that it?"

"Yes, I have something to repay," Tormarin rose abruptly.

"A revenge, in fact?"

She shook her head.

"No, I do not call it revenge. It is punishment—the just punishment earned by the man who married Nesta Freyre and brought her in return nothing but misery."

Tormarin rose abruptly.

"What have the affairs of Nesta Freyre to do with you?" he asked sternly. "As you are obviously aware, she was my wife. And I do not propose to discuss private personal matters with an estranged stranger."

He moved towards the door. "I think our interview can very well terminate at this. I do not wish to forget that I am your host."

"You are more than that," said Madame de Varigny suavely. "You are my brother-in-law."

"Tormarin swung round and faced her."

"Yes," the suavity was gone, replaced by a curious deadly precision, enhanced by the foreign rendering of syllable value, "I am—or, until my marriage—Margherita Valdi. I am Nesta's sister."

Tormarin regarded her steadily.

"In that case," he said, "I will hear what you have to say. Though I don't think," he added, "that any good can come of raking up the past. It is better forgotten."

"Forgotten?" Madame de Varigny seized upon the unlucky word. "Yes—it may be easy enough for you to forget—your who took Nesta's young, beautiful life and crushed it; you who came like a thief and stole from me the creature in the whole world whom I love—my blemish, my little sister. Oh, yes," her voice rose passionately—"easy enough when there is another woman—a new love—with whom you think to start your life all over again! But I tell you, you shall not! There shall be no new beginning for you—no marriage with this Jean Peterson to whom you are now facing. I forbid it!"

Blaise stemmed the torrent of her speech with an authoritative gesture.

"May I ask how the news of my engagement reached you?" he asked, his cool, dispassionate question falling like a hammer dropped into some molten stream of lava.

"Oh, I have kept tight. I have the means of knowing. There is very little that has happened to you since—since I wrote to you of Nesta's death," she stammered a little over the words, and Blaise, despite her anger, was conscious of a sudden flash of sympathy for her—"very little that we have not known. And this—your engagement. I know of that when it was barely a week old."

"I'm really curious to know why my affairs should be of such surpassing importance to you. My engagement? For instance—how did you hear of it?"

"Oh, that was easy"—contemptuous—"There was another man who loved your Miss Peterson—this Monsieur Burke. I used him. I know he was afraid that you might win her, and I told him that if ever you became engaged he must come and tell me, and I would show him how to make sure that you should never marry her. Oh! That was very simple!"

"I'm afraid you promised more than you can hope to perform. I grant that you have every reason to dislike me—hate me, if you will. I acknowledge, too, that I was to blame, miserably so, for Nesta's unhappy death, as much in fault as she herself. But there is nothing gained at this late hour by apportioning the blame. We must make bad mistakes—and we have each had to pay the price."

"You are being a very light price—unforgiveness," she commented with intense bitterness.

"Do you think so?"

Something in the quiet, still utterance of the brief question brought her face swiftly, curiously, back to his face. It was as though, behind those four short words, she could feel the terrible pressure of years of endurance. For a moment she seemed to waver, then, as though she had deliberately pushed the impression aside, she laughed disingenuously.

"Too tight to satisfy her sister, at any rate."

Tormarin froze.

"It is fortunate, then, that my ultimate fate does not lie in your hands," he observed.

"But that is just where it does lie—in the palm of my hand—there!"

She flung out one shapely hand, palm upward, and pointed to it with the index.

"And now—see—I close my hand—no! . . . And this beautiful marriage of which you have dreamed, your marriage with Miss Peterson—it does not take place!"

"Are you mad?" asked Blaise contemptuously, experiencing an Englishman's distaste for this display of unforced drama.

She shook her head.

"No," she said quietly. "I am not mad."

The air of theatricality seemed to fall suddenly away from her, leaving her a stern and sombre figure, invested with an intrinsic atmosphere of tragedy, filled with one sentiment only—the thirst for vengeance.

"No, I am not mad. I am telling you the truth. You can never marry Jean Peterson, because Nesta—your wife—still lives."

Tormarin felt back a pace. For one moment he believed the woman had gone genuinely mad—that by dint of long brooding upon how she might most hurt and punish the Englishman whom she had never forgiven for marrying her sister, she had evolved from a half-mad mind the knowledge that Nesta still lived and that she would be able to prevent his marriage with any other woman.

And then, looking into those somber soft brown eyes with the granite hardness in their depths, he could see the light of reason burning steadily within.

Madame de Varigny was quite sane, as sane as he was himself. And if so . . .

A great fear came upon him—the fear of a man who dimly senses the approach of some appalling danger, and knows that it will find him utterly defenceless.

"Do you know what you are saying?" he demanded, his voice roughened and uneven.

"Yes, I know. Nesta is alive," she repeated simply.

"Alive?"

The word was wrong from him, hardly more than a hoarse whisper of sound. He swung round upon her violently.

"But you yourself wrote and told me of her death?" She nodded placidly.

"Yes, I wrote a lie."

"But the official information? We had that, too, later, from the French police, confirming your account. You would be careful about what you are telling me," he added sternly.

"Lies won't answer, now."

"The need for lying is past," she answered with the same placid assurance. "The French police wrote quite truthfully all they knew. They had found the body of a suicide, whom I identified as my sister. To strengthen matters I bribed someone as I knew also to identify the dead girl as Nesta. She was a married woman, too, the poor little dead one! So it was quite simple. And I took Nesta home—to Chateau Varigny. I had married by then. But she had learned of my marriage through friends in Italy and wrote to me from there, telling me of her misery with you and begging me to succour her. So I went to Italy and brought her back with me to Varigny. Then I planned that you should believe her dead. It was so simple."

She repeated complacently.

"But what was your object in all this? Why did you scheme to keep me in ignorance? What was your purpose?"

"Why?" Her voice deepened suddenly, the placid satisfaction with which she had narrated the carrying out of her plan disappearing from it completely. "Why? I did it to punish you—first for stealing my Nesta from me and then, because, after you had stolen her, you brought her nothing but misery and heart-break. She was so young—so young! And you, with your hideous temper and your cold, formal English ways—you broke her heart, covered her with humiliations, and made her count to come with every man she met, to compete with Tormarin's theft. No—English or Italian, least of all Italian—would have endured her conduct."

"She would not have played with other men if you had loved her. She was all mine. And you—you were like a wet log that will not burn!" She gestured fiercely. "You never loved her! It was in a moment of passion—of desire that you married her! . . ."

By Louis E. Pichman's Vegetable Compound

Flying Into a Temper

Tough, irritable! Everything says she. Shereen-Lydia E. Pichman's Vegetable Compound will build up her health by its tonic action.

But you were sure, eventually, to meet some other woman and learn what love—real love—is. So I waited. And when I saw you at Montevideo with Jean—I knew that the day I had waited for so long would come at last. I knew that your punishment was ready in my hand."

"Do you mean"—Blaise spoke in curiously measured accents—"do you mean that you deliberately concealed the fact that Nesta still lived so that she should not be able to prevent your marriage with Jean?"

"No, that you should not marry the woman that you loved when the time came. Yes, I planned it all! I kept Nesta safely hidden at Varigny, and I made little changes in her appearance—a woman can do so much with make-up—the colour of her hair, the style of her dress. It was, all little changes, so that if by chance she was seen in the street by anyone who had known her as your wife she would not easily be recognised. Oh, as she poured out her story of complacency at her own skill in deception—I thought of every little detail."

Tormarin stood listening to her silently, like a man in a trance. His face had grown drawn and haggard, and his eyes burned in their sockets. Once, as she poured out her story of trickery and deception, she heard him mutter dazedly: "Jean . . . Jean," and the anguish in his voice might have moved any woman to pity save only one who was utterly and entirely obsessed with the desire for vengeance.

But the intolerable suffering which had suddenly lit his face and rimmed his mouth with tiny beads of sweat was most and drink to her. She gloried in it. This was her hour of triumph after the long years of waiting.

She smiled at him blandly.

"I think I have behaved very well," she pursued. "I might have waited till you were actually married. But I was too wise to punish the little Jean. She, at least, is on the square; as you say—though it would have revenged my Nesta well had I waited. You, on the other hand, you have deceived the life of the woman you love. I did think of it. Ah! You would have suffered then, knowing that the Jean you were married was neither wife nor mad, but a—"

"Be silent, woman!"

"To (Be Continued)."

THE RHYMING OPTIMIST

By Alice Michalski

NEW JOYS

New joys will bloom while years go by.

As roses greet the smiling sky With every glad, recurrent June, And linnet peeps her happy tune.

New joys will stretch their tendril out To creep and climb and twine about Our lives, till all is fair and bright. Unhappy doubts and fears take flight.

New Joys! Then yield to no dismay When these new cherished pains away. For all things change and all are fleet, Most evanescent are most sweet.

Ah, trust the future, it will bring Glad days that shine and love long. Days of dear and prized are these That now weave glowing tapestries!

Pointing out that there are few cases on record of automobiles struck by lightning, the National Safety Council advises against leaving cars for emergency house shelter in storm.

A naturalist says that many fish can travel faster than an express train. And, he forgot to add, many others think they can.

Diamonds owned by U.S. citizens are valued at more than \$4,000,000.

OGDEN'S

Just Right for Cigarettes!

Made of selected Virginia tobacco, blended to produce a cool, sweet, fragrant cigarette, one that is more easily rolled. This tobacco has always sold on its merits.

OGDEN'S FINE CUT CIGARETTE TOBACCO

Your pipe knows Ogden's cut pipe.

Free "Chatterbox" cigarette papers with every package.

Big Police Campaign

Scotland Yard Wagon War On Highway Robbers

Moving with military precision, Scotland Yard recently began the biggest police campaign on record to crush the modern outlaw counterparts of England's most notorious highway robber, Dick Turpin.

Designed to end an alarming wave of road-side holdups which were believed to have been increased by arrival of gangster deportees from the United States, the police flying squad closed all approaches to London, closed and inspected thousands of automobiles and placed a wide area under rigid supervision.

The operations, directed by Lord Trenchard, were on an unprecedented scale but public opinion backed the police action because of many hold robberies on the King's highway in the last two months.

In contrast to the blunders and speed of the original Dick Turpin who terrorized the highways 200 years ago, the modern bandits have fast automobiles and many pistols. The police are not armed, but there have been many demands by the public lately that they be provided with pistols.

The declaration of active war by Scotland Yard coincided with the arrival of a group of British gunmen who had been expelled from America. About 1,200 police combed the streets and roads.

British Made Cars

Stood Grueling Test

Were One, Two, Three In Every Class During Alpine Contest

A terrific contest for automobiles was conducted when the International Alpine Trials were held. There were contests for four grades of cars, which had to drive over a long, steep, and tortuous course through the Alps, a grueling trial of speed and mechanical efficiency. Competitors were not permitted to put fresh water in their radiators, the ability to negotiate the hills without a "bolt out" being one of the factors considered in the race.

British made cars were one, two, three in every class, and sometimes four, five, and six as well. There were cars from France, Germany, Italy and other countries in the competition, and they were simply "blotted out."

British workmanship is rarely surpassed by that of other nations.—St. Thomas Times-Journal.

OGDEN'S

Just Right for Cigarettes!

Made of selected Virginia tobacco, blended to produce a cool, sweet, fragrant cigarette, one that is more easily rolled. This tobacco has always sold on its merits.

OGDEN'S FINE CUT CIGARETTE TOBACCO

Your pipe knows Ogden's cut pipe.

Free "Chatterbox" cigarette papers with every package.

Little Helps For This Week

"To believe in Christ is little faith; to receive Him is appropriating faith; to understand Him is intelligent faith; to assimilate Him is active faith."—Cornelius Wolflein.

Helping others to the Bread of Life. These four lines by Frances Hollister nicely express what must be the deep longing of every sincere follower of the Christ:

This was my heaven; to be great enough to give, to be small enough to take into my soul the truth I see. And then to turn and seek the bread that feeds the hunger of humanity.

Had Insurance Rate

Saskatchewan Municipal Rate Fled

The Saskatchewan municipal health insurance rate has been fled for this year the same as that in effect last year. Decision regarding the new rate was reached at a meeting of the board in Regina.

The flat rate remains at four cents per acre, the crop rate varies in the various local districts from four to 18 cents per acre.

This rate was based upon an estimated crop loss for the entire territory which expires September 15, of \$300,000. Actual loss as at August 29 was \$700,000. Total business in force totalled \$28,000,000.

It is usually safe to say that when a child is pale, sickly, peevish and restless, the cause is worms. These parasites gnaw the stomach and intestines, causing severe disorders of the digestion and preventing the infant from deriving sustenance from food. Miller's Worm Powders, by destroying the worms, correct these faults of the digestion and serve to restore the organs to healthy action.

Another British Invention

Glowgram For Theatres Can Be Read In The Dark

Theatres and cinemas will soon provide a new type of programme—called a glowgram—which may be read in the dark. Glowgrams are black cellulose sheets with the printing in transparent type. As you have to be in the theatre to see that the light of the stage or screen is behind them. The printing is then perfectly legible. They are a British invention.

Worms sap the strength and undermine the vitality of children. Strengthen them by using Mother Graves' Worm Exterminator to drive out the parasites.

French Writer Comes To Canada

Jean Alouchette, French journalist and author of several articles dealing with Canada, is on his way to British Columbia, where he will devote some time to gathering literary material.

Did a Invent the Trouser Hangar?

It turns the pockets upside down!

"Three Good, Healthy Reasons" for Praise

TABLETS if they cost a dollar a box they are still a bargain. Baby's Own Tablets—two lovely boys and a girl, all of whom have been greatly benefited by the Tablets during babyhood, writes Mrs. Judson Miller, Moberly, Mo.

"I have three good, healthy reasons for praising the praise of BABY'S OWN TABLETS—two lovely boys and a girl, all of whom have been greatly benefited by the Tablets during babyhood, writes Mrs. Judson Miller, Moberly, Mo.

Reindeer Herd For North

Herd of 3,000 Animals Approaching Mackenzie River Delta

The herd of Alaskan reindeer being driven slowly eastward to the Mackenzie River delta to furnish a reserve food and skin supply for the natives of that district, has now reached a point between Canning and Sledrochit Rivers less than one hundred miles from the Alaskan-Yukon border.

Starting two years ago from the west coast of Alaska, the herd of about 3,000 animals has been driven along the coast line over most difficult terrain which made progress slow and laborious. No reasonably accurate estimate could be made as to the exact time it would take for the journey, owing to lack of knowledge as to the difficulties facing the expedition.

It was learned from the Department of the Interior, which is sponsoring the movement, that satisfactory progress has been made and the herd may be able to cross the delta of the Mackenzie on the ice this winter.

The object is the Kigittuag Peninsula, a long arm jutting into the Arctic Ocean just east of the mouth of the Mackenzie River. Three families of Laplanders, brought to Canada from their native land a year ago, are making all preparations for receiving and caring for the herd. They have built corrals, laid out grazing grounds and otherwise established themselves in readiness for their work.

WORLD HAPPENINGS BRIEFLY TOLD

Construction of a Canadian legation building in Tokyo has been suggested to the Dominion government, but no decision has been reached.

Hugo Hilgarm, 65, pioneer mechanical engineer, inventor, manufacturer, economist and oldest member of the Franklin Institute, is dead. He invented the bevel gear generating process.

Sir William Grenfell, medical missionary to Labrador, believes Newfoundland should under no circumstances dispose of her Labrador territory.

A total of 124 wartime ships tied up at various ports of the United States have been ordered withdrawn from registry by the shipping board paratory to scrapping them.

Rumors that Japan was increasing her naval strength at Shanghai, circulated in Chinese newspapers, brought a sweeping denial from the Japanese consulate.

The Aero Club of France has recognized Maryse Hilla as the maker of a new altitude record for women. August 19 she rose to a height of 31,400 feet.

Up to the end of July importations of United States anthracite for the seven months of the calendar year had declined 30 per cent. compared with the corresponding period last year.

Intimation that a new trade agreement between Canada and Belgium is being considered by both countries was given at Quebec, by J. Van Rikst, consul general for Belgium at Vancouver.

Recipes For This Week

(By Betty Hargley)

HOLLAND BEET SOUP

- 1 pint hot beef stock.
- 2 tablespoons sugar.
- 1 teaspoon grated onion.
- 2 tablespoons vinegar.
- 3 beets.
- Salt and pepper.

Add sugar, vinegar, salt and pepper, and grated onion to the stock. Boil together about ten minutes. Boil the beets in salted water. Peel and put through a coarse strainer. Add five minutes before serving add beets to stock, heat and serve. Too long cooking will spoil the bright red color.

When The Turn Comes

Undoubtedly farm land values in the United States will have to be lowered and in the process fortunes will be wiped out. In Alberta only in exceptional cases will anything of this sort happen. The rule will be the contrary, which fact is certain to place farm owners of this province on a stable foundation when the turn comes—Calgary Herald.

A hen-pecked man was informed that a Bengal tiger had escaped from a menagerie, and was chasing his man-to-the-law.

"Why should I worry about what happens to a Bengal tiger," he answered.

DELEGATES RETURN TO BRITAIN

The last of the United Kingdom delegation to the Ottawa Conference returned to England on the Cunard Line "Aurania" from Montreal. The party were headed by (left) R. B. Howorth, C.B., C.M.G., secretary of the United Kingdom delegation; J. C. Howorth-Thompson, K.C.B., C.M.G., head of the British Department of Agriculture; V. H. Boyce, M.B.E.—Cunard Photo.

End Lonely Vigil

Four Soviet Scientists Return From Black Arctic Wastes

Four Soviet scientists have ended a lonely two-year vigil in the bleak Arctic wastes of Northernland, during which their only contact with civilization was by radio. They have been relieved by four other observers, one of them a woman.

A brief wireless despatch from the icebreaker "Sibirskiy," now engaged in Arctic exploration, reports that the party of four, headed by the geographer, Ukhaviy, were taken aboard the relief party, sent out aboard the icebreaker, had taken over.

The woman member of the replacement party is Iri Rusizova, who although she is only 30, is a veteran of polar expeditionary work. With three male colleagues she will spend the next two years at the four outposts, whose only human inhabitants will continue their explorations and mapping of Northernland.

The four men who are returning were reported to be in excellent health despite the difficulties of their assignment.

Collecting railway tickets, first editions of newspapers and magazines, and bats for stoolball, the forerunner of cricket, is the hobby of an eminent London lawyer.

Ralph: "Before Amos was married he said he would be the boss or know the reason why?"
Chester: "And now?"
Ralph: "He knows the reason why."

World Court Is Fair

Smallest Nation Always Sure Of Getting Square Deal

The theory of the World Court and the League of Nations is that each nation has an equal say in the affairs, and equally certain of a square deal in any controversy. This was exemplified by the decision of the World Court handed down recently in a dispute between the small republic of Lithuania, and the mighty powers of Great Britain, France, Italy and Japan.

On the main point, which had to do with whether Lithuania had the power to sack a particular state official, the Court decided in favor of the republic.

It is a good thing that the international tribunals get a chance to show their impartiality sometimes because it is a lesson to the world at large, and an assurance to the small nations that their interests are properly taken care of and no favors shown by the big fellows.—St. Thomas Times-Journal.

The Perfect Dinner

When the Prince of Wales attended the recent medical conference banquet at Albert Hall, London, England, he ate what world experts in dietetics chose as the perfect dinner. Of course, he said he enjoyed it. It consisted of: veal, soup, boiled salmon, mutton, quail with salad and an ice.

Bowling greens to be used exclusively for coal miners have been opened at Stirling, Scotland.

SUNDAY SCHOOL LESSON

SEPTEMBER 15

THE REPORT OF THE SPIES

Golden Text: " Jehovah is the strength of my life; of whom shall I be afraid?"—Psalm 27:1.

Lesson: Numbers 13:1 to 14:45.

Devotional Reading: Psalm 85:7-17.

Explanations and Comments

Twelve Spies Sent To Canaan, verses 1-20.—When encampment was made at Kadesh-Barnea, near the border of the Promised Land, Moses sent twelve spies over the border to ascertain the nature of the land, whether good or bad, whether wooded or not, and to gain information about the inhabitants, whether they were numerous or not, whether strong or weak, and also facts about how they lived, whether in cities, camps, or strongholds. He also directed them to bring back specimens of the fruit they found.

The land was ready for the people, but were the people ready for the land? The report which Caleb and his company was to bring was to decide, not a question of geography, but a question of philosophy. It was to test the present capacity of the people of God, to determine whether the heart of Israel was ripe for its inheritance.—George Matheson.

What we do in life is always depends upon whether we see the difficulties in the light of God, or God in the shadow of the difficulties.—J. Campbell Morgan.

15-23.—The spies proceeded to Hebron and into the Valley of Eshcol. They cut down a branch of a single cluster of grapes so heavy that two men could carry it on a staff between them. Eshcol means a cluster; it indicates the name from the richness of the fruit. The spies also brought back pomegranates and figs.

The Majority and Minority Reports

20-23.—On their return to Kadesh, the spies reported to Moses and Aaron and all the congregation. They showed the fruit they had brought back and declared the land to be excellent, for food, for drink, and for the expression "It floweth with milk and honey." Honey was of great importance to the Israelites. It took the place of our sugar. "How sweet is the land," the spies testified to, for they were far more inclined to dwell upon the difficulties in the way than upon the attractiveness of the land. "The people that dwell in the land are strong and the cities are fortified, and very great; and, moreover, we saw the children of Anak (giants) there."

What a difference it would make if the people of life could only see the good to and! The cities were great, and yet God was greater, the giants were strong, and yet God was stronger.

Appetizing Salads

This Healthful Addition To Menu Had Beginning In Early Roman Days

The very appetizing—one could almost say "delicious"—salads which are served today had their beginning in early Roman days when green uncooked vegetables were eaten with salt sprinkled over them. Cress was brought to Rome from Persia and eaten with bread, and was later raised by the Romans because its delicate green looked well in garnishes. The ancestor of our lettuce and endive grew wild on the banks of the Mediterranean in ancient times.

Salads tell into diadems for a time and many people, chiefly masculine, spoke eloquently of salads as "salads." There is nothing difficult about the preparation of a salad which is "appetizing" and "delicious" to eat at the best should have a flavor of dressing carefully blended with the other ingredients and served as cool and crisp as possible. Care should be taken to arrange the salad daintily and garnish it attractively. Salad may be prepared in the morning and kept in the refrigerator.

Fish or meat salads are nourishing for the main course, a fruit salad may be served in place of dessert and a vegetable salad is both healthful and appetizing in place of hot vegetables.

Most important of all is the salad dressing. While there are other types of dressing, two of the most popular are mayonnaise and boiled dressing. These two recipes can be made with evaporated milk which gives them a rich smoothness and body. The Eggless Mayonnaise given is widely used because six yolks are not needed.

EGGLESS MAYONNAISE

- 1/2 teaspoon salt.
- 1/2 teaspoon dry mustard.
- 1/2 teaspoon paprika.
- 1/2 teaspoon granulated sugar.
- 1/2 cup grain corn.
- 3 tablespoons evaporated milk.
- 1 cup salad oil.
- 2 tablespoons vinegar or 1 tablespoon lemon juice.

Thoroughly mix dry ingredients. Add evaporated milk and blend thoroughly. Beat in salad oil gradually. Add vinegar, or vinegar and lemon juice, beating until mixture is smooth. Makes one cup.

A Costly Mix-Up

Perhaps the most unusual mix-up in magazine shops occurred recently in New York. Through a secretarial mistake, a famous writer sold the same story to two magazines—a weekly and a monthly. It appeared in the weekly, while the monthly was on the press. The presses were stopped and the story removed at a \$10,000 expense, which the writer has naturally agreed to pay.

Canadian Clubs And Radio

Will Discuss Methods Of Co-operation With Radio Commission

The executive committee of the Association of Canadian Clubs will approach the Dominion Radio Commission to discuss methods of co-operation, it was decided at the annual convention held in Regina.

The association took a definite step toward entering the radio field when, as part of the same resolution, it authorized the executive to propose a series of addresses on public affairs in connection with the Dominion broadcasting system which will shortly be established.

The understanding of the delegates was that the radio commission would be a fact in about two months time. Funds amounting to \$800,000 are already available for the work of the commission, which will establish a trans-Canada chain of powerful stations. It has been stated that among the first work to be undertaken by Premier R. B. Bennett will be the organization of the commission.

A further resolution passed by the delegates provides for the setting up within clubs of study groups for the intimate review of national problems.

The Transient Problem

Fear Expressed That It May Produce A New Criminal Class

If the movement of unemployed transients from place to place is allowed to continue it will produce a new criminal class from which Canada has hitherto been practically free. This is one of the findings of the committee of the Canadian Bar Association on the administration of criminal justice, and forms part of the committee report.

To cope with the transient problem the committee recommends active enforcement of the vagrancy sections and other portions of the criminal code "which seem to have been left in abeyance."

Legislation which would impose on every community responsibility for the maintenance of its indigents passed without delay, the committee urges.

Despite prevalence of conditions which might be expected to lead to crime there was no marked increase in criminality in Canada, during the past year, the committee finds. Canadians had remained law-abiding.

Air Transportation

U.S. Pilot Congratulates Canada On Part Played In Establishing Civil Aviation

Air transportation and radio communication will play a great part in carrying out the policies agreed upon at the Ottawa Imperial Conference, according to William P. MacCracken, Jr., of Washington, D.C. He urged Canada to promote aviation to its utmost.

Speaking before a service club meeting in Calgary, Mr. MacCracken, who is honorary secretary of the American Bar Association, declared aviation and radio would play an important part in world affairs.

Mr. MacCracken is a pilot of distinction and was in Calgary attending the annual convention of the Canadian Bar Association. He paid tribute to the Canadian government in establishing civil aviation and to the aid which Canada rendered the United States when it started organizing civil aviation six years ago.

Among the world's highest mountains are two in India that are over 26,600 feet tall but have no names.

"Did you 'remember' your step son in your will?"
"Yes, he won't get a penny."—Karlksnurm, Oslo.

Tramp: "The lady next door 'as given me a piece of home-made cake. Won't you give me something' too!"
Lady (sightfully): "Yes, I'd better give you a digestive tablet." — The Humorist, London, England.

EVERY WOMAN FEELS SHE SHOULD HAVE A WOOLLEN JACKET DRESS FOR FALL AND WINTER

Here's a beauty. The jacket-like blouse can be made in either of two ways. In the large sketch, the revers neckline, which is so generally becoming and popular is just as smart as can be. The miniature view shows it in a more severe collarless type that emphasizes the bodice closely to the body.

The skirt is attached to a camisole top. Inverted plaits at either side of the front, provide ample fullness.

A rum-brown tweed mixture made the original. You'll be delighted with its small coat.

It's so simple to fashion. Wool crepe, soft monotone woollen and rough crepe silk are also suitable.

Style No. 540 is designed for sizes 14, 16, 18, 20 years, 36 and 38 inches bust.

Size 16 requires 2 1/2 yards 54-inch, with 1/2 yard 36-inch for camisole and 1 1/2 yards 38-inch lining.

Price of pattern 25 cents in stamps or coin (coin is preferred). Wrap coin carefully.

GRAIN EXPORT QUESTION WILL BE DISCUSSED

Winnipeg, Man.—For the purpose of discussing with the grain and milling interests in the United Kingdom and on the continent the standardization of Canadian export grain, E. B. Ramsay, chairman of the board of grain commissioners for Canada, will shortly leave for Europe.

Inquiries will be made especially into the question of Garnet wheat and practical methods sought for dealing with this variety of grain, either as a separately graded variety, as recommended by both the western grain standards board and the agricultural committee of the House of Commons, or as at present graded under the Canada Grain Act, which allows the Garnet to go into the Northern grades of red spring wheat, but not to grade higher than No. 2 Northern.

Mr. Ramsay will be accompanied by J. Rayner, secretary of the board of grain commissioners, and will be met on the other side by Dr. F. J. Birchard, chemist to the board, who has been attending a bread exhibition at Rome.

May Be Deported

Entered That Douchkoff Leader Has Been Served With Papers

Yorkton, Sask.—The Canadian government here on high authority that Peter Vereg, Douchkoff leader now serving in 18-month term in Prince Albert jail, following a conviction for perjury, has been served with deportation papers by the warden on behalf of the Department of Immigration. Serving of these papers, it is understood, followed investigation reported to have been made by the immigration department through the Saskatchewan attorney-general's department. Formal proceedings may require considerable time as there is the right of defence as well as the right of appeal.

Mr. Vereg did not come to Canada direct from Russia, having lived in Germany for a time before sailing from Hamburg.

A man prominent in Douchkoff affairs stated here recently that Vereg would like nothing better than to return to Germany, as he is a great admirer of the German people.

Under the Immigration Act, a person who is not a Canadian citizen may be deported if he has been convicted of a criminal offence in Canada.

Think Panic Has Passed

Bank Letter Sees a Period of Reconstruction Ahead

Toronto, Ont.—The Canadian Bank of Commerce, in its monthly news letter, made public here, saw in rising security prices evidence of a period of reconstruction.

"A few important developments," the letter said, "would seem to indicate that the period of panic has passed and that a time of reconstruction is ahead."

While the letter made much of the general improvement to international action levelled at the force of depression, it added conditions throughout Canada showed signs of recovery in themselves.

Recovery of sentiment in the west, improved crop conditions and prospects over those of last year, and the willingness of Canadian financial institutions to back sound expansion of business, it said, promised greater activity.

Railway and Truck Problem

Must Give Thirty Days Notice To Cancel Rate Schedule

Ottawa, Ont.—The board of railway commissioners, in a judgment handed down, appreciated the problems set up by highway truck and water competition, but denied the railways right to cancel freight schedules with less than 30 days notice.

The railways had argued that when freight rates were lowered to meet competition on the promise of shippers that they would use the rails, the bus and water carriers promptly lowered their rates and the shippers failed to redeem their promises. They asked the right to make changes in their schedules with no more than five days notice.

The commissioners held that the 30-day notice was statutory and could not be disturbed.

W. N. U. 1959

Study British Markets

To Take Advantage Of Trade Agreements Reached At Conference

Ottawa, Ont.—At the coming session, parliament will likely be asked to take steps to enable Canada to better participate in the advantages offered by the trade agreements entered into at the Imperial Economic Conference. A careful study of the markets in the United Kingdom is being made by the Department of Agriculture in Ottawa. A campaign for increased hog production is one of the projects under consideration.

One of the surprises has been the low prices for live cattle in the United Kingdom. Canada shipped no cattle to Britain last week and up to the present the department has received no information of any being shipped this week. The chief reason is that Canadian domestic prices have advanced above United Kingdom prices while shipping costs are taken into consideration.

Despite the 20 per cent. duty on Irish cattle, beef prices in Britain are high. Canada is exceedingly cheap in Irish cattle and in great abundance so that its consumption has materially increased. Lamb and mutton are also in great demand.

A heavy movement of western cattle to the Ontario farms this fall is expected. The live cattle market is strong in the east. In Britain it is spring and with so great an abundance of feed in Ontario this year, plans are being made to ship western cattle, fatten them during the winter and have them ready for export in the spring.

Loading Wheat At Churchill

Fifth Ship Arrives At Northern Port To Load Cargo For Cardiff

Churchill, Man.—After battling gales, fog, and ice in the North Atlantic, the H.M.S. Strathgordon, for a week the S.S. Grethelund from London arrived September 7th, and 20 minutes later was loading 264,000 bushels of wheat for Cardiff.

The "Grethelund" is the fifth ship to load grain here this year. She expects to discharge her cargo in Cardiff in two weeks.

Capt. Thomas Griffiths, of the H.M.S. Strathgordon, said he was somewhat by ice in the strait. This ship does not have a tugboat.

Officers said such a compass was missing in Hudson Bay. The M. H. Lady Logan, carrying a party of government geologists at Ottawa, who have been working in Chesterfield, is reported off Cape Eskimo, en route here.

Commissioner Of Excise

Toronto Investment Banker To Succeed G. W. Taylor, Who Has Resigned

Ottawa, Ont.—Hugh D. Scully, investment banker, Toronto, will be appointed Dominion commissioner of excise. He will succeed G. W. Taylor, who has resigned.

Mr. Scully will bring to his new duties a wide experience in finance and business. For some time he has been associated with the Canadian Manufacturers' Association, occupying the position of assistant secretary in that organization. He was also active in connection with the automotive industry, and since 1922 has been a member of the firm of Stewart, Scully, Company, investment bankers.

Mr. Taylor retired from the post of commissioner of excise on October 1.

Woolen Mill Project

Scottish Firm May Establish Mill In Calgary

Calgary, Alberta.—Dr. A. Oliver, owner of two little woolen mills at Galashiels, Scotland, has offered to dismantle one and establish it in Calgary. Alderman R. H. Weir told members of a Calgary service club.

If plans are successfully completed, Alderman Weir said, the mill would employ 700 men. He intimated, however, plans were still in an early stage.

Had Perilous Ride

Miss Mestree, Who—Unknown to Pilot Bill Monday, Young Jerry O'Leary grabbed the tail of Monday's plane and rode aloft 1,000 feet, hanging on grimly as the ship wavered with its rear-end weight. When the pilot found out what was wrong he landed without injuring O'Leary.

London To Visit London

Simla, India.—Natal leaders of British India are to visit London once again, and with the king-emperor's plenipotentiaries, attempt to settle a settlement of their country's political future.

Western Wheat Production

Estimate For This Year Places Crop At 426,513,000 Bushels

Winnipeg, Man.—The wheat fields of western Canada will produce 426,513,000 bushels of wheat this year, according to the annual estimate of grain crops compiled by the Winnipeg Free Press. Saskatchewan's production is placed at 217,600,000 bushels, Alberta's at 168,120,500 bushels, and Manitoba's at 40,800,500.

Although the Saskatchewan wheat acreage is the largest of the three, the estimated average yield in that province is lower than in the others. It is placed at 14 bushels to the acre. In contrast, the average yield in the three provinces is 207,191,000 bushels; barley 66,645,800 bushels; rye at 9,573,400 bushels, and flax at 3,165,500 bushels.

Manchester Cotton Strike

Employers Have Expressed a Willingness To Arbitrate

Manchester, England.—A ray of hope appeared in the Lancashire weavers' situation when employers expressed a willingness to arbitrate.

During the meeting, lasting half an hour, the Cotton Spinners and Manufacturers Association committee drafted its reply to the letter of Sir Henry Bertie, Minister of Labor, to sponsor a meeting with union leaders. The association said it would attend such a meeting, if invited.

A union representative commented that the action was a surprise and the employers had gone further toward settlement of the issues than was expected.

TO INVESTIGATE SHORTAGES IN COLLEGE FUNDS

Winnipeg, Man.—Investigation by a judicial committee of facts surrounding shortages in University of Manitoba endowment funds was unofficially promised by Hon. R. A. Hoey, Minister of Education and acting premier. Mr. Hoey also stated he would recommend restoration of university funds.

"The government will undoubtedly make restitution of the funds at some time in the future," Mr. Hoey said, "but they cannot, of course, do so until after the matter has been thoroughly threshed out in the courts and by a judicial commission, if, as I understand it, it is the intention of the government to appoint such a commission to fix the ultimate responsibility for the losses."

"The matter is purely one of government policy," Mr. Hoey continued, "it is not a question for decision by any one member of the cabinet, it must await the decision of the cabinet as a whole."

The inquiry in connection with the university funds has no bearing on the similar position of the Anglican church. This will be dealt with by church authorities. Rev. Canon S. Gould, Toronto, general secretary of the missionary society of the Church of England in Canada, held a conference with His Grace Archbishop I. O. Bringer of the diocese of Rupert's Land. He will also spend some time in the west discussing the western church crisis with heads of the missionary dioceses.

UNITED STATES AMBASSADOR TO CANADA RESIGNS

It is with regret that Canadians learn of the resignation of Col. MacNider, United States Ambassador to the Dominions, who will return to Washington. Col. and Mrs. MacNider have become very popular in Canada. The Ambassador is pictured above (left) with a close-up of Mrs. MacNider.

POPULAR REAR ADMIRAL

It is understood that Rear Admiral Evans, "Evans of the Broke" fame, is to succeed Vice Admiral H. J. Twedd as Commander-in-Chief of the British Station of the British Navy. The popular Rear Admiral is pictured above.

Evils Of Waste

Lord Bessborough Refers To Economic Troubles Of The World

Vancouver, B.C.—Evil of waste, waste of substance, of opportunity, and most important of all, waste of energy and human effort through lack of co-ordination—that, in the opinion of Lord Bessborough, governor-general of Canada, is the worst of the evils from which the world is suffering.

So he expressed himself in an address here recently before a gathering of city service clubs.

"It is a very fashionable amusement nowadays to try to diagnose maladies from which the world is suffering. Nearly all of us fancy ourselves world doctors and like to think we can point things out which we are allowed to administer our own particular economic pill, our own financial tonic," said his excellency.

"Though we may differ about the right cure, though we are by no means unanimous about symptoms, there is one general principle on which I think we are agreed—that is, One of the worst evils we have to overcome is waste."

Men Return To Work

C.P.R. Shop Departments, Winnipeg, Operating On Short Time

Winnipeg, Man.—Nearly 1,200 employees of the Canadian Pacific Railway's locomotive department here, returned for 12 days' work in September. In addition to the 700 men of the car department who were taken on again on September 1 to work for 21 days, according to an announcement of the company.

All men will continue to be employed on the basis of a 40-hour week and no extra help will be taken on the announcement added.

The employees of the car department worked 22 days in August, a considerable increase over the previous month, made possible by the necessity of preparing additional grain cars to take care of the large grain crop expected this year.

Tariff Helps Canada

Ottawa, Ont.—Considerable benefit to Canadian trade with Australia is seen in the tariff amendments introduced in the commonwealth budget according to the Canadian trade commissioner at Melbourne, D. H. Ross.

Beauharnois Project

Plans Approved For Expenditure Of Fifty Million Dollars

Ottawa, Ont.—Plans for the general works of the \$50,000,000 Beauharnois project have been approved by the Dominion Government. Official announcement to this effect was made recently.

The plans given the stamp of approval include the 14-mile Beauharnois canal between Lake St. Louis and Lake St. Francis, near Montreal, which will shortly be conveyed by the company to the Dominion.

Passing of the order-in-council sanctioning the plans removes any obstacle in the way of the Beauharnois concern fulfilling its contract with the Ontario Hydro commission on October 1. According to the terms of this contract the company will make 35,000 horse-power available on that date for the use of the commission.

This amount is to be increased gradually until a total of 250,000 horse-power is placed at the disposal of the Hydro authorities at the end of five years.

Signing of the agreement by the Dominion and the company and the transfer of the canal to Canada is expected to take place shortly.

Relief For Veterans

To Be Equalized

Will Be On Same Basis As For Others

Ottawa, Ont.—Relief to war pensioners, whereas less than granted to civilians by municipalities, will be placed on the same relief basis as granted by the municipalities, the department of pensions and national health announced, in confirmation of the principle announced previously by the Prime Minister.

Mr. Bennett was quoted as having said that the unemployed veterans would have their pensions increased to conform with the relief rate paid by municipalities. This, the department officials explained, was technically incorrect. Not the pension rate but the relief rate would be raised, they said.

Veterans, receiving small pensions, were barred from receipt of relief and more than other unemployed. The attention of Premier Bennett was drawn to the situation by a resolution sent him by the Winnipeg Legion council.

UNION CABINET PLAN MAY SOLVE B.C. DIFFICULTIES

Victoria, B.C.—Premier Tolmie of British Columbia stepped out upon the traditionally treacherous ice of "union government" with the support of such a move confident that the footing has been made more secure by the frigid rigidity of the times, and with the confident march of the National Government in England to assure them.

The premier said to would shortly issue a statement which would include a clause favoring the establishment of a union government composed of men, who, regardless of other considerations, appear to be able to render the best service to the state, and "along the lines of the National Government in England" as the best method of meeting present conditions.

The announcement is the first in the hazy atmosphere of political rumor that has enveloped the province for many months. Those who have stood undecided as to what would happen and what they would do when it did happen, must soon declare themselves, and the electorate will presumably have an early chance to say whether they have done well or not.

Though events may be expected to move rapidly, some little time will probably be necessary to clarify the situation. It is not thought that Premier Tolmie's plans are clear-cut as yet. He is conferring with W. J. Bowser, K.C., former Conservative premier, who is regarded as playing an important role in the situation.

In all probability the premier will go ahead with his plans regardless of who joins or who stays out. In the ordinary course of events the legislature would be called together, the new government's programme presented, and an appeal made to the people on it.

Every possible combination of public men has been suggested as the likely members of the new government, but beyond the presumption that certain members of the present cabinet will go out, and certain Liberals will come in, forecast is futile.

MEAGRE RESULTS OBTAINED FROM ARMS PARLEY

Newcastle, England.—Disappointment in England and other countries over the meagre results of the first six months of effort at the world disarmament conference at Geneva, Arthur Henderson, Labor leader, and president of the disarmament conference, told the Trades Union Congress here.

It was Mr. Henderson's first public announcement on disarmament since the adjournment of the Geneva conference. He said he frankly confessed the results were far from what he had expected.

A critical situation was created, he said, by Germany's demand for arms equalization. The suggestion was that Germany leave the conference, he said, because it would now be impossible to achieve success there, but this, he added, would mean disaster.

"It would lead certainly," he said, "to a renewal and intensification of the old competitive race for armaments." Although the results to date were not encouraging, he added, it was early to declare the conference a failure. "I have refused to contemplate failure and cannot do so now," he said. "There has never been a conference with a greater public opinion behind it than this."

The Wheat Preference

Question Of Great Importance To Western Grain Growers

Ottawa, Ont.—Will the five-cent preference on Canadian wheat entering Britain apply only to wheat imported through Canadian ports? This question is being actively canvassed at Ottawa and there is a good deal of variation in opinion between the different departments.

The question is of importance to western grain growers, since the preference will probably come into operation early in October, before the new crop is really in the export field.

The department of national revenue, which administers the Canadian tariff, is inclined to think that any Canadian wheat proceeding to overseas through the United States in bond will have the preference.

The trade and commerce department, however, takes a different view, believing that the British government may insist upon export wheat from Canadian ports and in British bottoms.

The trade and commerce department points out that what is impossible to identify and in similar circumstances, the Canadian customs service has imposed full tariff upon Canadian goods. Likewise, goods from British Columbia to Ottawa through the United States has been taxed the maximum duties on the ground that no custom can tell if it was Canadian or U.S. lumber.

Just how the wheat preference will work will not be clear until the conference reports are approved by the British Parliament, the wheat preference enacted and the regulations governing it issued.

Population Of Vancouver

Greater Vancouver Population Now Given As 368,340

Ottawa, Ont.—Population contained within the area designated as Greater Vancouver, according to the census of 1931, is placed at 368,340. It is reported by the Dominion Bureau of Statistics.

The distribution by location is: Burnaby district municipality, 25,564; West Vancouver district municipality, 17,524; North Vancouver district municipality, 4,786; West Vancouver district municipality, 4,786; North Vancouver city, 8,510; University endowment area, 755; Vancouver city, 246,593.

Not So Many Failures

New York.—What is described as an "astounding drop" in business failures is reported by Bradstreet's Weekly, covering the final week of August. Failures declined from 527 the preceding week to 425 for the week ending September 1. It was the smallest total for any week since November, 1931.

Police Veterans Retires

Ottawa, Ont.—Headquarters of the Royal Canadian Mounted Police announced the retirement of Inspector Robert Hunsby after a long period of service. Inspector Hunsby served most of his time in Western Canada, and was lately stationed at Prince Albert, Sask. He had been inspector since 1914.

This parody on "The Litany of the
Pew" (famous during the World
War) appears in Bindery Talk:

Why Worry?

Either you are successful or you're
not successful.
If you are successful there is nothing
to worry about.
If you are not successful there are
only two things to worry about.
Your health is either good or you are
sick.
If your health is good there is nothing
to worry about.
If you are sick there are only two
things to worry about.
You are either going to get well or
you're going to die.
If you are going to get well there is
nothing to worry about.
If you are going to die there are only
two things to worry about.
You're either going to heaven—or
you're not going to heaven.
If you are going to heaven there is
nothing to worry about.
If you are going to the other place
you'll be so busy shaking hands
with old friends you won't have
time to worry.
SO WHY WORRY???

Grain Market Features

(Extract from report supplied by
the Research Dept. of the SEARLE
GRAIN COMPANY LIMITED WIN-
NIPEG.)

Threshing Barley for Export Trade

Recognizing the possibility of an
improved demand for Alberta, this
year from overseas countries, farmers
growing this grain of type suitable for
distilling purposes are being cautioned
by the Alberta department of agri-
culture regarding threshing methods.
It is most important, officials point
out, that the barley for export be not
threshed too close.

Distilling interests, it is stated, look
with disfavor on shipments of barley
containing any appreciable percentage
of skinned or broken kernels. Barley
qualified for the highest price must
therefore be threshed in a manner
that will avoid this damage. This
evil can be avoided by making an ad-
justment of the threshing cylinder.
The number of concave teeth should
be reduced, if necessary, and the con-
cave plates should be opened well
away from the cylinder.

World's Shipments

World shipments of wheat and
wheat flour for the week ending
August 20 amounted to 7,511,000
bushels, compared with 6,980,000
bushels for the previous week and
10,008,000 bushels for the correspond-
ing week last year. North American
shipments amounted to 4,768,000
bushels, a slight increase for the
week. Shipments from the Argenti-
ne and Australia increased slightly
for the week. Russia shipped 144,000
bushels of wheat, the first shipments
from this source for many weeks.

For the four weeks ending August
20, 1932, world shipments amounted
to 29,342,000 bushels compared with
shipments of 31,385,000 bushels for the
same period in 1931-32. All exporting
countries have shipped less wheat
this year than last, but the main dif-
ference occurs in the case of Russia.
Russia has shipped over 17½ million
bushels less wheat during the past
four weeks than during the same
a year ago.

Coarse Grains

Apathy was apparent in coarse
grains insofar as cash sales were con-
cerned. A small volume of oats was
worked, with some question as to
whether it was for export or domestic
needs and a few loads of barley were
confirmed in the export field. Other-
wise, operations were very slack.
With the exception of flax, difficulty
was experienced in holding even
minor upturns.

Producing a Quality Crop

Having decided on the most suit-
able wheat variety the next step in
the production of high quality wheat
is the growing of a crop that is reason-
ably true to variety. This can only
be done by using seed that is guaran-
teed or known to be pure and true.
Registered seed, sealed in the sack, is
always pure and true to variety. Seed
from a certified field is next best.
Either of these cost but very little
extra money. The method adopted
by many wheat growers is to obtain
sufficient registered seed to seed a few
acres of clean summerfallow each
year, to harvest this carefully, and to
use the product of this field to seed
the whole farm the next year; or
often a farmer in the district is found
who is willing to multiply good regis-
tered seed and to make it available to
his neighbors at a small premium
over elevator price. Such a man is
helping his whole district and should
be encouraged. All seed of course
should be treated for smut and should
be carefully cleaned so that there are
no weeds or other kinds of grain pre-
sent, most weeds found on a farm at
some time or another having been
seeded through the seed drill. Good
clean polisher seed gives a high
quality, high yielding crop and helps
to control and eliminate weeds.

Palm Dairies Limited

CALGARY, Alta.—In the past,
BURNS & CO. LIMITED has always
sought Live Poultry from the Pro-
ducers, and the Chicken and Fowl were
placed in our Feeding Stations and
fed a mixture of corn, cottonseed
and milk for a period of two or three
weeks before killing. We believe that
the results obtained in handling in
this manner were satisfactory to the
Producers as well as to the Distribu-
tors.

Conditions during the past two
or three years have changed, and we
have come to the conclusion that the
farmer who will pen or crate-fatten
his Poultry on the farm for a period
of time before killing, and then do the
killing himself, will realize the most
money for the surplus Poultry he in-
tends turning off the farm.

We do not intend to quote prices on
Live Poultry this Fall, but we will be
in the market for Dressed Poultry of
all descriptions later on when the
weather becomes cool enough so that
Farmers can kill and pack their stuff
without any danger of it going bad.
We are quite sure that there will be
an market for small, thin, poorly
picked Poultry, and we advise all
Producers who have Poultry to sell to
call their flocks and put only the best
birds on feed for thirty days before
killing.

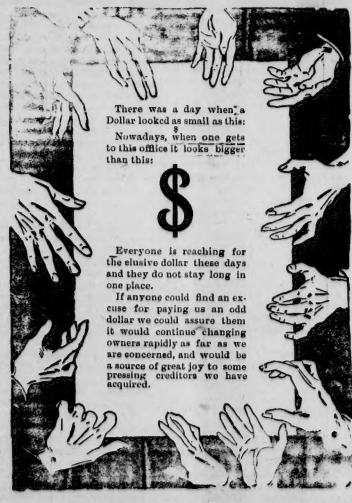

All Poultry should be dry picked
with heads and feet on. Many Pro-
ducers have gained experience in the
last few years in dressing Turkeys,
and while it is a little more difficult to
dry pick Chicken and fowl, it is quite
possible for Producers who have had
some experience in dressing Turkeys
to properly dress other kinds of Poul-
try.

Farmers of Western Canada will be
interested to know that a big percent-
age of the Poultry raised in Ontario
and Quebec is crate fattened, fed and
killed by the Farmers themselves, and
they turn off some very fine Poultry.
We believe that Western Canadian
Farmers can do just as well as the
Eastern Farmers, after they have had
a little experience.

We will issue a circular containing
picking and packing instructions at a
later date. In the meantime we urge
all Producers who intend to market
either Chicken or Fowl to get ready to
finish and kill their own Birds right
on the farm, and in handling in this
way realize the most money.

Yours very truly,

PALM DAIRIES LIMITED
(Subsidiary of Burns & Co. Ltd.
